

# IMPORTANT NOTICE

## #35010 Digital Control Set

Stricter guidelines and regulations as well as the efforts to improve our products continuously, have prompted us to change the hardware (PCB) at the #35010 PIKO digital control set. To ensure a comprehensive and trouble-free range of functions, the PIKO digital control set should be operated only by a DC power supply (for example #35000).

Please note the following when commissioning the #35010 PIKO digital control set:

- the circuit is only suitable for operation with DC voltage
- white power supply cable (+) to white terminal, black cable to black terminal
- with polarity reversal connection is not a function
- the unit will run on an AC power supply, too but it turns quickly off under load
- damage does not occur by AC voltage or polarity
- recommended values of the power supply: 16- 24 V DC; 4-5A
- possible deviating specifications in the user manual, or on the packaging, will expire by this notice .
