Stahlträgerbrücke 850mm – Typ 12 – modularline

modularline: Modell 2015

This kit consists of 4 main girders and 5 cross girders. The components are CNC milled and made of 5mm thick plastic. The material can be painted without problems, it is UV resistant and ideal for outdoor use. The bridge itself has a length of 850mm, a width of 220mm and a Height of 100mm.

For the final assembly you will need two aluminium L-profiles or one aluminium U-profile, as well round profiles for the hand rails. These parts are not included in the kit and have to be purchased separately, e.g. in DIY stores.

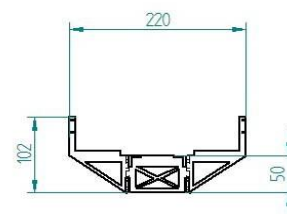

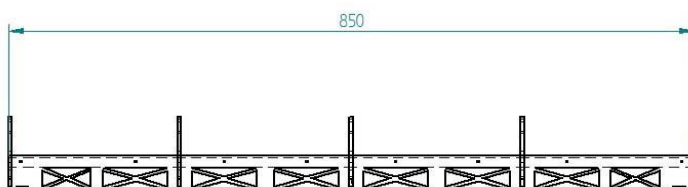

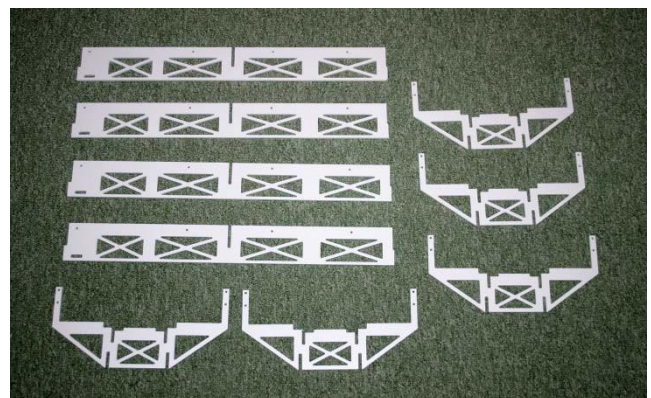

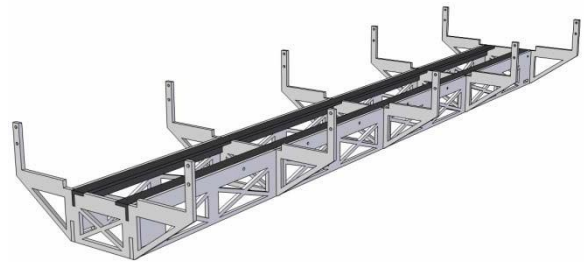

The load capacity of the bridge is much higher due to the use of aluminium profiles. Just stick the main girders together with the cross girders and glue it. After this, the aluminium profiles (which serve as reinforcement) will be screwed together with M3 screws at the right and left side of the main girders.

The bridge is prepared for our connection system and therefore adapted for a modular installation.

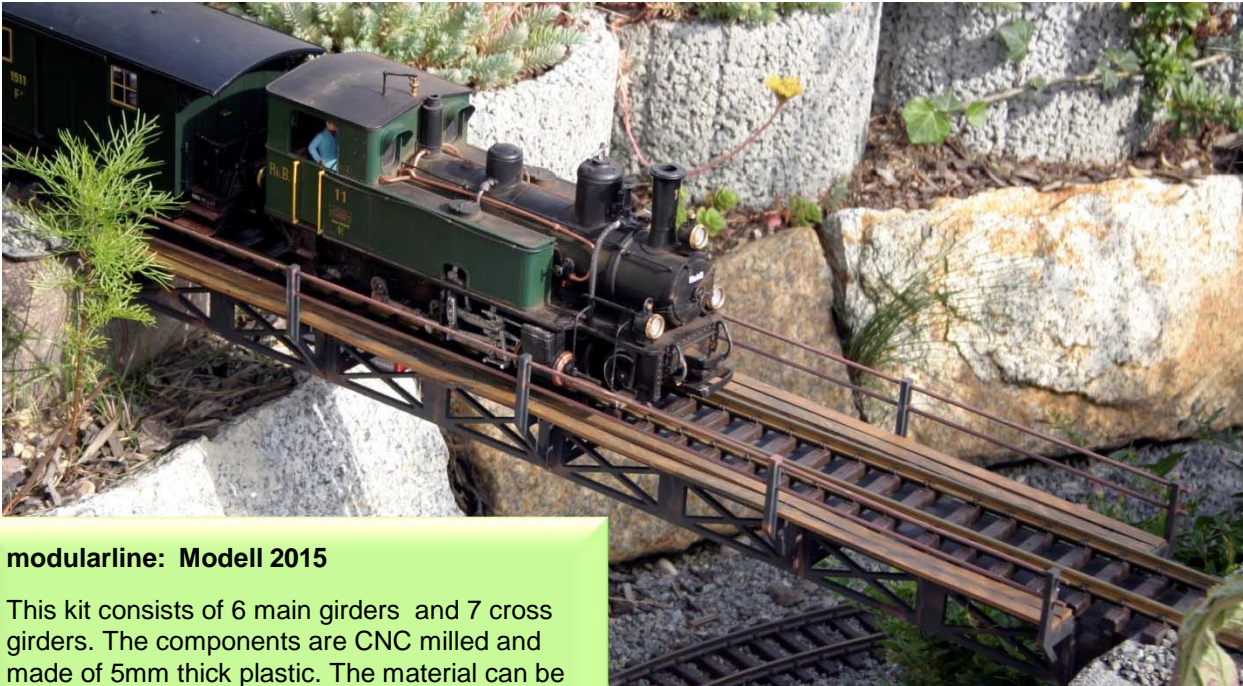

Thanks to the modular standard width and height of the "modularline" concept, different lengths and radii can be combined.

Of course, the bridge can be used as a single bridge. Kit price for 850 mm: € 55.00

Bausatzpreis 850mm: 55,00€

Stahlträgerbrücke 1200mm – Typ 12 – modularline

*FOTO 850mm Version

modularline: Modell 2015

This kit consists of 6 main girders and 7 cross girders. The components are CNC milled and made of 5mm thick plastic. The material can be painted without problems, it is UV resistant and ideal for outdoor use. The bridge itself has a length of 1200mm, a width of 220mm and a Height of 100mm.

For the final assembly you will need two aluminium L-profiles or one aluminium U-profile, as well round profiles for the hand rails. These parts are not included in the kit and have to be purchased separately, e.g. in DIY stores.

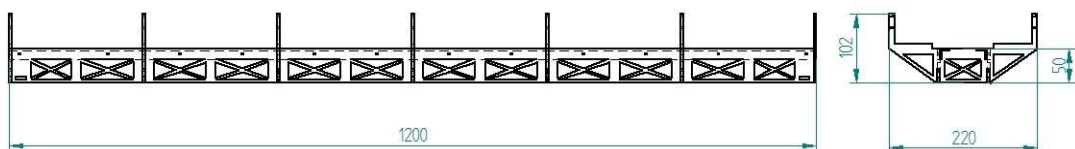

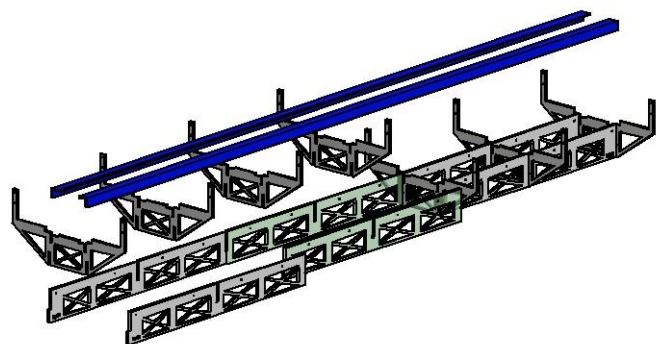

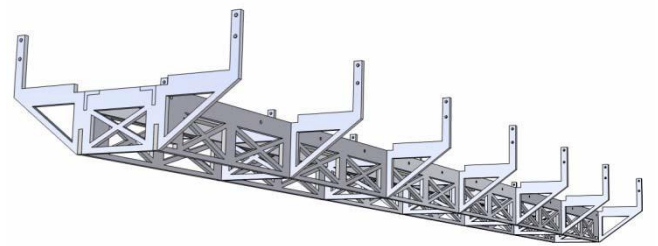

The load capacity of the bridge is much higher due to the use of aluminium profiles. Just stick the main girders together with the cross girders and glue it. After this, the aluminium profiles (which serve as reinforcement) will be screwed together with M3 screws at the right and left side of the main girders.

The bridge is prepared for our connection system and therefore adapted for a modular installation.

Thanks to the modular standard width and height of the "modularline" concept, different lengths and radii can be combined.

Of course, the bridge can be used as a single bridge. Kit price for 1200 mm: € 70.00

Bausatzpreis 1200mm: 70,00 €

Kasträgerbrücke 850mm – Typ 13 – modularline

*FOTO 850mm Version Typ01

modularline: Modell 2015

This kit consists of 4 main girders and 5 cross Girders as well as 4 upper supports. The components are CNC milled and made of 5mm thick plastic. The material can be painted without problems, it is UV resistant and ideal for outdoor use. The bridge itself has a length of 850mm, a width of 220mm and a height of 167mm. For the final assembly you will need two aluminium L-profiles or one aluminium U-profile, as well as round profiles for the hand rails. These parts are not included in the kit and have to be purchased separately, e.g. in DIY stores.

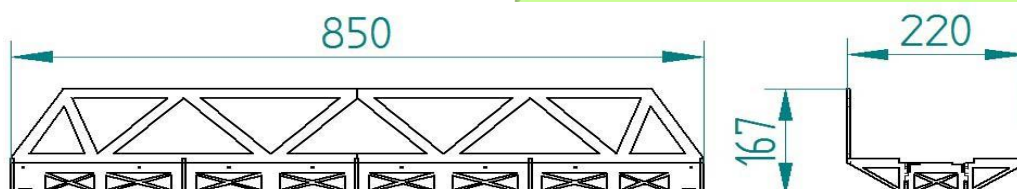

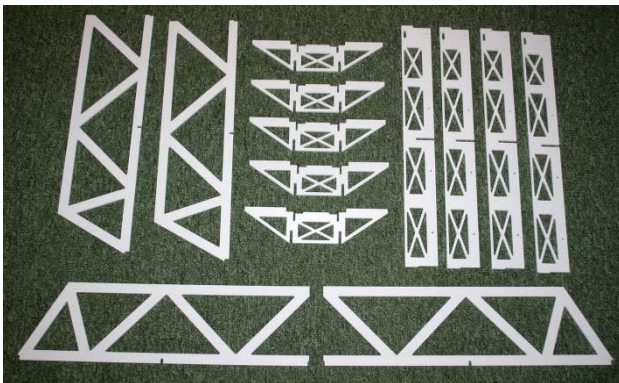

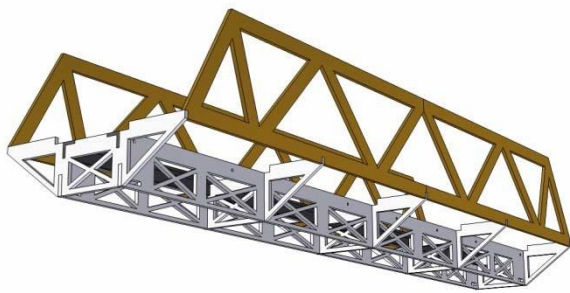

The load capacity of the bridge is much higher due to the use of aluminium profiles. Just stick the main girders together with the cross girders and glue it. After this, the aluminium profiles (which serve as reinforcement) will be screwed together with M3 screws at the right and left side of the main girders.

The bridge is prepared for our connection system and therefore adapted for a modular installation.

Thanks to the modular standard width and height of the "modularline" concept, different lengths and radii can be combined.

Of course, the bridge can be used as a single bridge. Kit price for 850 mm: € 75.00

Bausatzpreis 850mm: 75,00 €
